

Might we regard costs of ownership (e.g. fishing license, fishing net) as just mandatory inputs as opposed to others (e.g. fertiliser, irrigation)

Is it conceivable that an input might be mandatory

Can I genericise all resource types - crops, livestock usage, employment etc into a single table of resource sub-types?

On the plus side:  
=====  
much easier model,  
much easier for some reporting.

On the minus side:  
=====  
redundant columns  
or increased complexity  
in reporting & updating
